I remember...

- Avoid single/double
- ApprovalTest package
- Don't do DateTime maths
- Cleanup usings
- Check overflow by default
- 1 bug = 2 bugs
- Most expensive bugs are due to dead code
- Rewrite from scratch is mostly not a good idea

- Show empathy
- Regex search/replace
- Task list
- .Net portability analyser
- Think before you debug
- Editorconfig
- House sparrow/Song sparrow
- Winforms is still alive

- There is a way to test webforms
- Legacy code is also my code
- When debugging, disapproving is more efficient
- Debugging strategies
- SEQ and serilog
- Denise Jacobs
- John Robbins
- If there is a method in the framework, use it

- “I don’t know”
- .Net Core 3
